Parking lot USB exercise

Contents	- There are two types of files on this USB: personal and work files. - The personal files contain personal information. - The work files contain PII of other people and hospital operations.
Attacker mindset	- Personal information about himself could be used with social engineering to get more information out of Jorge. - The shift schedule could be used to identify when the hospital will be easiest to attack with minimal staffing. - Coworker information could be used to impersonate hospital staff to gain hospital information.
Risk analysis	- A managerial control that can be implemented is increasing employee awareness. - What to do when finding suspicious devices? - An operational control that can be implemented are regular vulnerability scans/assessments and automatic patches/updates. - A technical control that can be implemented is disabling USB port functions.
